

Western Michigan University- Sangren Hall

Demolition. Kalamazoo, MI

General Project Scope

Homrich was contracted to provide demolition services on the 230,000 square foot "old" Sangren Hall that was located within 20 feet of the newly constructed Sangren Hall.

Due to the close proximity to the new building, extreme caution was taken in the demolition process as to not interfere with the active new Sangren Hall.

Also due to the close proximity of the new building, and more important, due to the fact that the demolition project was located in the middle of an active major university campus, special safety considerations were implemented. In addition, other contractors were completing work in the immediate area and project coordination was necessary to insure uninterrupted project execution. The project was completed on time and without incidence.

In order for the General Contractor to meet LEED requirements, Homrich contract specified a 78% recycle rate of all materials removed from the demolition site. Of the 26,197 tons of material, Homrich was able to generate a rate of 96% recycled material from the project.

TOTAL DEMOLITION
